

Introducing Surgically Clean Air™

BioHorizons has partnered with surgically clean air to deliver premium air cleaning solutions to your office. The Jade Air Purification System can help you, your staff and your patients by capturing air pollutants.

Jade SCA5000C Air Purification System

The Jade Air Purification System utilizes Surgically Clean Air's multi-stage air purifying technologies that work together to clean, purify and re-energize the indoor air. The multi-stage filtration system captures air pollutants, filtering 99.998% of particles down to 0.1 microns (the typical size of a virus). The negative ion generator re-energizes air by charging it with negative ions.

Engineered to maximize the air change rate by moving large volumes without the air drag that often occurs in more inferior air purifiers, Unlike those other air purifiers, the top air outlet design allows air to cascade out the top and efficiently flow throughout the room. Household quiet, but with the strength to provide healthier air in large rooms also - which is perfectly suited for medical environments.

features & ordering information

- **6-stage air filtration process**
captures and removes air pollutant
- **Large-capacity airflow management**
6 air changes per hour at < 50 dB
- **Sound-dampening design**
operate at a comfortable noise level during procedures
- **Smart control features**
contactless, hand-wave control and automated prompts
